

KUMAWAT MOTILAL

Software Developer | E-Commerce Developer (Magento 2)

+91 78740 28263 · kumawatmotilal0035@gmail.com · Gandhinagar, Gujarat

PROFILE

Motilal Kumawat is a Software Developer specializing in custom software development, backend development, API integrations, database management, and web application development. He builds scalable, reliable, and user-friendly software solutions with a focus on performance, functionality, and overall user experience. He also writes technical blogs, tutorials, and development guides covering software development and web technologies. 3+ years of experience, regularly managing 2–3 concurrent projects across clients and internal tools.

PROFESSIONAL EXPERIENCE

Software / E-Commerce Developer — Mavenbird Technologies

April 2023 — Present | 3+ Years (including internship)

Zorch — Merchandising Store Network (Current)

- Full-stack developer across a large multi-store Magento platform, owning custom modules and store-specific business logic.
- Store view/website setup, Figma-led UI delivery, WCAG 2.2 AAA accessibility across all stores.
- Managed store creation, customer import/export, and complex production data migrations.

Master FFL — Firearms Industry E-Commerce Platform

- Built a custom classifieds module with logic tailored to firearms-industry compliance and listing requirements, now in active production use.
- Ongoing custom configuration to support compliant, industry-specific workflows.

Jazeera — E-Commerce Platform

- Developed a custom Painter product type with customer group-based customization and checkout logic.
- Built cart functionality and multiple search result pages, including Arabic-to-English search translation.
- Delivered performance and UX optimizations across cart, checkout, and search.

Muaban247 — Classifieds Platform (Full-Stack, Built from Scratch)

- Sole full-stack developer; designed and built the platform end-to-end.
- Independently provisioned, deployed, and maintained staging and live production servers.

Company Demo Site & Multi-Vendor Base Module

- Built a one-step PHP demo setup site with scripts for bulk demo data insertion and cleanup.
- Built a Multi-Vendor Base Module covering vendor onboarding, custom PayPal membership payments, and vendor-wise shipping logic.

Internal Systems — Built From Scratch

HRMS — Human Resource Management System

- Built end-to-end for internal company use: employee information management, leave management, and daily time-log tracking.
- Integrated with the company PMS via API to fetch and sync project data.
- Automated email alerts triggered when a daily time log is missed.

CRM — Customer Relationship Management System

- Built from scratch for internal company use, with custom backend logic and database design for managing customer and lead data.
